The request for continued examination received 10 July 2006 has been made of record. Claims 1 and 3-42 are pending.

Claims 1 and 3 and 5-42 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakaya et al.

Nakaya et al disclose aqueous dispersions suitable for coating applications. These dispersions are taught as comprising blocked isocyanate resins which are taught as being melt blended with an acrylic resin carboxyl groups. These carboxyl groups are taught as neutralized and thus are seen as salted. While the Tg of these isocyanates is not explicitly recited, it is the position of the examiner that Tg values such as claimed instantly would be inherent to the isocyanates of the reference since they would need to melt below the temperature at which the blocking agent would be released. Applicants limitations to corrosion resistance, gloss retention etc are seen as inherent since the chemical limitations are met.

Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
